

Digital Health Platform: Verification & Audit Report

Comprehensive Clinical Architecture, Patient-Doctor Sync & UI Proof

1. Executive Summary & Problem Resolution

This report documents the resolution of the patient linking, consent protocol, and UI consistency issues. Previously, the doctor appointment creation generated a detached random identifier (e.g. PAT_98036) with hardcoded dummy age (30 yrs) and missing email binding. This caused the clinical chart to trigger 'Patient History Locked by Consent Protocol' and displayed 'null' metadata across consultations.

Key Fixes Implemented:

- **Patient Linking by Email & Code:** Doctors now schedule appointments using a smart patient selector that resolves to registered patient accounts (Manan Soni, PAT-4726A2, manansoni2905@gmail.com).
- **Bidirectional Sync:** Scheduled appointments instantly appear on the Patient Dashboard under 'Upcoming Appointments' with doctor specialization, clinic name, date, and time.
- **Active Consent Protocol:** Clicking 'Open Chart' navigates to `#/doctor/patient-detail?id=PAT-4726A2`, which immediately renders the verified green 'Active Patient Consent (24h Clinical Window)' banner.
- **UI Polish:** Eliminated all raw 'null' strings, pre-filled age defaults, and debug state toolbars across all portals.

2. System Integration Matrix

Component	Identifier / Endpoint	Status	Clinical Integration
Patient Account	manansoni2905@gmail.com (PAT-4726A2)	Verified Active	Primary Patient Master Record
Doctor Portal	Dr. Dhruv Patel (Patel Clinic / Neuro)	Online (Port 8080)	Schedules, Charts, Prescriptions
Consent Engine	/api/doctor/consent/request/	24h Window Active	Zero-trust ABHA/ABDM Standard
Diagnostic Lab	/api/lab/orders/ & LIMS Gateway	Connected	Pathology Test Upload & Sync
Hospital Facility	/api/hospital/admissions/	Connected	Inpatient Bed & Discharge EHR

3. Verification Proof: Doctor Portal Dashboard

Verification of real appointments schedule, zero 'null' text, and clean patient visit history.
